What is radon?
Radon is a radioactive gas that comes from uranium in rock, soil and water.
Sometimes radon gas enters a house from **CRACKS** in the foundation and openings around pipes.
YOU CANNOT SEE, SMELL OR TASTE RADON, but it can be bad for your lungs. Radon gas can cause lung cancer. It is even more dangerous for those who smoke.

Breathing in radon decay products

Alpha particle

Radiation damage to DNA in lung tissue

Lung

Windpipe
Directions:

Color the Zone 1 counties with the greatest chance for high radon levels RED.

Color the Zone 2 counties with a moderate chance for high radon levels YELLOW.

Color the Zone 3 counties with the lowest chance for high radon levels GREEN.
You can **TEST** your home for radon with a radon test kit. If your house has a high radon level, it can be fixed.

**A MITIGATION SYSTEM** is a pipe that goes under the house and up through the roof, like a chimney. The radon gas goes up the pipe and to the air outside. This can help remove radon gas from your home.
