Eureka 763 E. Main St., P.O. Box 613, 89801 (775) 237-5262
Fallon 111 Sherrick Road, 89406 (775) 421-5121
Gardnerville/Minden 1332 Waterline St., P.O. Box 339, 89423 (775) 782-9660
Incline Village 1661 Tahoe Blvd., Suite 10, P.O. Box 8208, 89462 (775) 832-4150
Las Vegas 2410 Red Rock St., Suite 100, 89146 (702) 222-3130
Lovelock 810 6th St., P.O. Box 321, 89424 (775) 723-2523
Pahump 1651 E. Calvada Blvd., 89048 (775) 727-5352

The University of Nevada, Reno is an Equal Opportunity/Inclusive Action employer and does not discriminate on the bases of race, color, religion, sex, age, creed, national origin, veteran status, disability, physical or mental handicapping, or sexual orientation in any program or activity it operates. The University of Nevada employs only United States citizens and aliens lawfully authorized to work in the United States.

What is Cooperative Extension?

Our purpose
We’re the outreach college that extends knowledge from the University of Nevada — and other land-grant universities — to local communities to address issues. We are a federal-state-county partnership with 17 offices throughout the state. Our more than 200 personnel — with the help of volunteers — deliver non-degree educational programs based on local needs. In 2001, UNCE made more than 540,000 face-to-face contacts with community citizens, a 26 percent increase over 2000.

Our program areas
- Agriculture
- Community Development
- Health and Nutrition
- Horticulture
- Human and Family Development
- Natural Resources

Our mission
To discover, develop, disseminate, preserve and use knowledge to strengthen the social, economic and environmental well-being of people.

UNCE publications
To access our more than 460 on-line publications, log on:

UNCE educates in all 17 counties!

Volunteers extend educational programs

Janna Gibbinn moved to Virginia City Highlands five years ago because of the free-roaming horses. She wanted to see them healthy and viable. What she found were acres of invasive tall whitetop. She drove through the highlands, spraying weeds along roads and waterways and educating neighbors about the destructive plant.

“I eradicated 90 percent of whitetop from the highlands,” reports Gibbinn, “but it has spread to many new areas.” She will soon have help from Storey County, which hired a weed-abatement employee.

Gribbinn is one of more than 300 Weed Warrior volunteers, trained by UNCE’s Sue Donaldson. In 2001, Weed Warriors gave more than 500 hours to enhance the health and economy of the environment. Another 1,670 adult and youth volunteers extend UNCE’s educational programs in other communities by teaching their neighbors healthy eating habits, efficient gardening practices or self-esteem-building skills to youth — to name just a few.

Facilitators and technical experts
guide conservation planning

Thirty people gather in the rural community center on a warm spring night. This diverse group — ranchers, sportmen, private landowners, agency professionals and representatives of environmental groups — listen attentively as university scientists describe the condition of Nevada’s rangelands. They ask thoughtful questions, make insightful remarks, pore over maps and plan field trips.

These dedicated volunteers belong to one of six local conservation planning groups. Their charge, from the Governor’s Sage Grouse Conservation Team, is to learn about the bird, identify species’ and human needs and develop a local 20-year plan to conserve sage grouse and sagebrush ecosystems. The Governor’s team asked UNCE to facilitate and help provide scientific information to guide the local groups. The process is going very well,” reports Doug Busselman, Nevada Farm Bureau Executive VP and member of the Governor’s team. “The local groups work effectively to make a difference without the heavy hand of a regulatory force.”

The sage grouse, once numbering 2 million in the West, has decreased to 250,000 or less, and it is feared the bird will become endangered. This “indicator species” signals declining health of the sagebrush habitat. “Sage grouse is the political trigger,” but it’s wise to take an ecosystem approach because of other species dependent on sagebrush,” observes Kent McDade, UNCE rangeland specialist.

Aless Busselman, “Cooperative Extension facilitators and technical experts are making a valuable contribution in educating and helping volunteers stay engaged when the going might get tough. I am hopeful we’re establishing a system of isolation implementation that is the future way we do business.”
4-H Centennial unites youth statewide

The National 4-H Centennial Celebration brought 400 Nevada youth and adults together in 19 local “conversations” to brainstorm ways youth can harness their power and become community leaders. Rightly representatives joined a State Conversation, resulting in youth seeking spots on state boards and pledging 11,000 hours of service to their communities.

“4-H is on the move in Nevada,” says UNCE Dean and Director Karen Hintm. “Young people have told us 4-H teaches them leadership and other life skills, and they intend to use them to make a difference.”

Nearly 48,000 youth, ages 6 to 18, enrolled in Nevada 4-H youth development programs in 2001, an increase of 30 percent overall and an increase of 38 percent in large cities and their suburbs.

Here are a few of the 2001 highlights:

- The Clark County Exploring Science program, developed by Youth Specialists Molly Latham and Brenda Cloud, reflects a rising interest in career exploration and serves a niche missing in the elementary schools.
- Ag in the Classroom attendance rose 25 percent. Carson City/Storey County 4-H Coordinator Jill Tingey reports that 2,000 kindergarten through third-grade students attended a two-day event teaching youth where their food and fiber come from.
- 4-H enrollment in Eureka County jumped from 45 to more than 200 participants largely due to the community’s need for youth development programming and local funding for a 4-H Coordinator.

Successful teen offender program expands to new communities

Jamie Ewansiff is a 15-year-old home school student in Tonopah, who became involved with some people she now admits she shouldn’t have. She and her parents were court-ordered to Project MAGIC after charges of runaway, injury to property and being under the influence of a controlled substance.

“When I first encountered Jamie, I thought to myself, she’s going to Caliente,” said Probation Officer D’Linda “Curly” Greber. “But after taking the intensive eight-week Project MAGIC program, she’s done a complete 180. She has good interaction with other youth and has not reoffended. I’m proud of her.” Jamie’s mother, Penny Strickland, reports, “We sit down now and negotiate.” Jamie’s grades have improved to A’s and B’s, and she’s planning to attend beauty college but hasn’t ruled out going for a Millennium Scholarship.”

Project MAGIC—a collaborative prevention program to help entry-level juvenile offenders become productive members of society—has graduated 1,080 rural county youth who have not reentered the system, saving taxpayers an estimated $5.4 million in incarceration costs for the 18 percent who statistically reoffended in Nevada. The program has graduated more than 100 youth in Las Vegas, and has also expanded to Carson City and the Duck Valley Indian Reservation.

Master Gardeners help neighbors save water, time, money

In 2001, Master Gardeners volunteered 28,000 hours of plant science education.

Here are just a few examples of a successful 2001 videoconference:

- Nutritients in five states focused on educational strategies in a two-day training conducted by UNCE’s Madeline Signan-Grant that resulted in improved knowledge, awareness, motivation and skills.
- More than 100 cattle producers at five sites learned how to economically improve the reproductive efficiency of their herds in a course taught by UNCE’s Ron Torell and other university instructors.

“People wonder why I do this, but I just love to help people help themselves,” says Hengen. “When I run into former students and they say, ‘Let me tell you how I solved that problem,’ I get real charged up!”

Hengen is one of more than 400 Master Gardeners statewide who undergo intense horticulture training and then volunteer at least 50 hours yearly helping their neighbors learn water-efficient techniques. In 2001, Master Gardeners volunteered 28,000 hours of plant science education, the equivalent of 14 full-time employees.

Master Gardeners teach by phone and e-mail, through the media and at garden clubs, senior centers, hospitals, schools, child care centers, ranches, farmers markets, demonstration gardens and prisons. In Reno’s Harvest for the Hungry, they grow vegetables and donate them to food banks. Youth also participate in Junior Master Gardener programs.

Reaching isolated communities with technology

In today’s high-tech world, an affordable’ Internet access can bring anywhere you want it to be—a college classroom, a learning center in your community or home at your own computer.

UNCE’s statewide use of live, interactive videoconferencing for educational programs and planning meetings increased more than 30 percent in 2001. These community learning centers help instructors and participants save travel time and dollars.

“Compressed video allows citizens to increase their knowledge and skills without having to travel far from home,” says Meggin McIntosh, Director of UNCE’s Excellence in Teaching Program. “Participants also hear ideas from other people who don’t live down the street.”

Here are just a few examples of a successful 2001 videoconferences:

- Nutritients in five states focused on educational strategies in a two-day training conducted by UNCE’s Madeline Signan-Grant that resulted in improved knowledge, awareness, motivation and skills.
