Fact Sheet: 99-80

Nevada's War on Weeds Steps to Success Step 6 – Plan Projects for Success

Robert E. Wilson, Extension Educator, White Pine County
Wayne S. Johnson, Cooperative Extension IPM Specialist
Sherman Swanson, Cooperative Extension Range Specialist
Susan Donaldson, Water Quality Specialist, Western Area Cooperative Extension

The weed management team cannot afford all the time it would take to plan every project in detail together. People would frustrate themselves by spending too much time meeting vs. doing weed management and quit before any actual work takes place. However, the people doing on-the-ground weed management need a written record of their planned actions and assumptions. This is project planning.

Planning occurs at several levels (state, county, or local) for a variety of objectives. The War on Weeds Step 2 – Build Coalition Through Collaborative Planning and Management (Fact Sheet 99-76) discusses the level of planning needed to build coalitions, uniting people behind a common goal based on a vision. That process must provide enough specifics to be achievable and it often needs to prioritize a long list of individual projects.

Often the weed management team develops action plans for sub-areas within the overall weed management area. In coordinated planning or as project planning begins the weed management area can be broken into smaller units of a size that is effective for project planning. Each area (pasture, range, drainage, lot, soil type etc.) that will need a different treatment project team, billing method, application timing, or other project variation should be referred to as a "unit". Even a right-of-way could be classified as a "unit". Use as many units as needed. They can be of any size as long as the combined unit descriptions adequately cover the total area that you will be working on. A unit may even describe entire ranches, sections or townships. The key is to **link unit size and area characteristics to the project planning needs**.

The weed management team will find a detailed and user-friendly map very useful (See War on Weeds, Step 3-Map Important Weeds for a Living Inventory, Fact Sheet 99-77). If the information needed for mapping and analysis is not available for the whole area, the inventory-type information collected in the form at the end of this fact sheet can help establish priorities.

The team needs to involve people who know the country and who will be working on the project in delineating units. As people look at maps and aerial photographs of a unit, they may remember or learn of small, isolated infestations others may not know about. Or, they may discuss particular features or management issues that could be addressed better by rearranging unit boundaries. In doing so, the group creates a unit map for the whole weed management area. This map is part of the essential record of what was planned and implemented.

After unit mapping, project plans are built from an assessment or inventory and analysis of the situation in the unit. To make project planning easier and more complete, a form is provided that includes spaces for inventory, analysis, treatment alternatives considered, and decisions made. Complete a form for each unit in the management area. Feel free to make multiple copies of the blank forms and as many copies of the completed forms as you will need to keep workers informed about the specifics of their project tasks.

Although all the inventory information is useful, some is more useful than others, or more useful in certain situations. This information could be used to prioritize among units. A point system could help rate units on the basis of importance or urgency (See War on Weeds Step 4. – Prioritizing Weed Management, Fact Sheet 99-78). With or without a point system, the form provides some information for objectively comparing units and alternative treatments.

As the project is implemented, the Unit Project Plan_____ (or Record of Action_____) form can be used as the permanent record.

UNIVERSITY
OF NEVADA
RENO

The University of Nevada, Reno is an Equal Opportunity/Affirmative Action employer and does not discriminate on the basis of race, color, religion, sex, age, creed, national origin, veteran status, physical or mental disability, or sexual orientation, in any program or activity it operates. The University of Nevada employs only United States citizens and those aliens lawfully authorized to work in the United States.

Unit Analysis Worksheet

Unit Name: _____ Unit Number: _____

Unit Description (back 40 acres, John and Mary Doe Farm, Duck Cr. Watershed) _____

Legal description (Township _____ Range _____ Section _____, etc.): _____

Owner: _____ Manager: _____

Address: _____ Town: _____

State: _____ Zip Code: _____ Phone: _____

Date Unit Mapped: _____

Inventory

Total acres within this unit: _____

Cropland acres: _____ %-infested with weed species: _____

Density of infestation: _____ Thick or heavy _____ Medium _____ Thin or light

Range/pasture acres: _____ %-infested with weed species: _____

Density of infestation: _____ Thick or heavy _____ Medium _____ Thin or light

Trees/brush acres: _____ %-infested with weed species: _____

Density of infestation: _____ Thick or heavy _____ Medium _____ Thin or light

Wetlands/riparian acres: _____ %-infested with weed species: _____

Density of infestation: _____ Thick or heavy _____ Medium _____ Thin or light

Waterway length: _____ %-infested with weed species: _____

Density of infestation: _____ Thick or heavy _____ Medium _____ Thin or light

Is this unit on the outer edge of a major invasive weed infestation? _____

Are adjacent or nearby sources of invasive weeds being treated? _____

If the infestation source is not currently being treated, can a cooperative, planned treatment program control it? _____

If yes, who are the key people with whom to plan this? _____

Unit's value if invasive weeds are left untreated (Value may be expressed as carrying capacity, re-sale value, forage production/acre, etc.): _____

Unit's potential value if invasive weeds are eliminated: _____

Estimated economic losses from spread from this unit to other areas if the unit is left untreated: _____

1. Predominate surface soil types in this unit, (underline one, and/or circle one or more)

Clay, Clay loam, Silt loam, Silty, Sandy loam, or Sandy

2. Predominant terrain in this unit (mark % of each that applies)

_____ % Flat to gently rolling (0% to 5% slopes)

_____ % Rolling (5% to 15% slopes)

_____ % Steep (greater than 15% slopes)

3. Accessibility of this unit for ground application (mark % of each that applies)

_____ % very difficult _____ % easy

_____ % both (some easy, some difficult)

4. Are there sensitive crops or other plants such as alfalfa or other crops, home gardens, endangered plant species, desirable range plants, etc. adjacent to invasive weed infested acres? Describe: _____

5. Describe the aquatic characteristics of the weedy areas in this unit
- | | | |
|---|---|-----------------------------------|
| <input type="checkbox"/> Boggy/sub-irrigated/marshy | <input type="checkbox"/> Springs | <input type="checkbox"/> Drainage |
| <input type="checkbox"/> Creak/stream/river | <input type="checkbox"/> Irrigation ditches | |
| <input type="checkbox"/> Lake/pond/reservoir | <input type="checkbox"/> none | |

6. What percentage of the infestation is adjacent to surface water? _____

7. Identify the treatment methods that could be used on this unit:
- | | |
|---|--|
| <input type="checkbox"/> Herbicide hand sprayer | <input type="checkbox"/> Cultivation |
| <input type="checkbox"/> Herbicide wick application | <input type="checkbox"/> Hand pulling |
| <input type="checkbox"/> Herbicide boom sprayer | <input type="checkbox"/> Tillage and seeding competition |
| <input type="checkbox"/> Herbicide aerial application | <input type="checkbox"/> Biological agents |
| <input type="checkbox"/> Livestock grazing | <input type="checkbox"/> Mowing |
| <input type="checkbox"/> Use of mulch | <input type="checkbox"/> Shading weeds |
| <input type="checkbox"/> Altering moisture status of the site | |

For each of the treatment methods worthy of further consideration estimate or calculate answers to the following questions before choosing the preferred treatment method:

A. Is the _____ treatment method applicable to all or only a part of the unit? _____ (If only a part, consider dividing the unit)

What chemicals or special equipment is needed? _____

What is the cost for obtaining or using the special equipment? _____

What is the cost of treatment per acre _____ Number of acres? _____

Total cost _____

What is the likely level of control from this method? _____

What is the likely level of control on the rate of spread after using this method? _____

Will any special permits or permission be required and if so what kind? _____

Will follow up treatment be required and if so what kind? _____

What is follow-up cost per acre? _____ Number of acres? _____

Total cost _____

B. Is the _____ treatment method applicable to all or only a part of the unit? _____ and _____

What chemicals or special equipment is needed? _____

What is the cost for getting or using the special equipment? _____

What is the cost per acre _____ Number of acres? _____

Total cost _____

What is the likely level of control from this method? _____

What is the likely level of control on the rate of spread after using this method? _____

Will any special permits or permission be required and if so what kind? _____

Will follow up treatment be required and if so what kind? _____

What is follow-up cost per acre _____ Number of acres? _____

Total cost _____

C. Is the _____ treatment method applicable to all or only a part of the unit? _____ and _____

What chemicals or special equipment is needed? _____

What is the cost for getting or using the special equipment? _____

What is the cost per acre _____ Number of acres? _____

Total cost _____

What is the likely level of control from this method? _____

What is the likely level of control on the rate of spread after using this method? _____

Will any special permits or permission be required and if so what kind? _____

Will follow up treatment be required and if so what kind? _____

What is follow-up cost per acre _____ Number of acres? _____

Total cost _____

For treatment of this unit, which method is preferred? A ____ B ____ C ____

None is OK _____

DONE! Please complete an analysis form for each of your units.

Unit Project Plan _____ (or Record of Action _____)

Unit Name: _____ Unit Number: _____

Area to be treated (or actually treated): Show this with a sketch (on the back of this sheet), refer to or attach a map, or describe the acres or the spot(s) receiving the treatment described below with a verbal description:

Description of the treatment:

Who will do (did) the project? _____

When will (did) they do the project? _____

What is (was) the stage of growth of the target species? _____

What will (did) they do? _____

What equipment or special tools such as sprayers, species of livestock etc. will (did) they use? _____

What chemicals, seeds, or other materials will (did) they use?

This treatment should be (was) applied under what environmental conditions? _____

Temperature _____ Soil Moisture _____ Wind speed _____

Vegetation conditions (dry, leafy, frosted, etc.) _____

What special precautions were needed? _____

What will be (was) done as a follow-up procedure? _____

Who will do (did) the follow-up project? _____

When will (did) they do the follow-up project? _____

What about the project or the follow-up will be (was) monitored? _____

How will it be (was it) monitored? _____

Who will do (did) the monitoring? _____

When will (did) they do the monitoring? _____

What was the result obtained after the first year treatment: _____

Were the control efforts successful? _____

% Control: _____

Should the same control be repeated or is a change in strategy needed? _____

What amount of control was obtained in subsequent years: _____

Revegetation percentage in subsequent years: _____
