Small Motor
Drop and Fetch

Materials needed:

Several pieces of string – 6 inches long
Several toys or objects of different weight such as a sponge, a ball, a wooden block, etc.

Securely attach the toys to the string and the string to the high chair tray. Baby will have fun tossing the toys off the edge. You will need to show him how to reel them back in again. It won't be long until he can drop and fetch them all by himself.

(Six to Nine Months)
